Abstract: Over the past few years, the Internet has played a very important role be it at home, work, or school. Internet applications such as online shopping and online voting has been widely accepted worldwide.

The Clone Port ordering system provides convenience for customers. The online Xerox ordering app set up the menu online and the customers easily place the order with a simple click. An ID and password are provided for each user. Therefore, it provides a more secure ordering.

Key Words: Printing, Order, Delivery, Android App

I. INTRODUCTION

Clone Port App is an application designed primarily for use in the industry. The system also allows for quick and easy management and online delivery which customers can browse and use to place orders with just a few clicks. This system allows the user to select the desired live location from the displayed menu. The user uploads the document and selects a property. An ID and password are provided for each user. Therefore, it provides a more secure ordering. Before the emergence of value chain management theory, the management mode of enterprises was static and only for its internal, and the emergence of this theory has driven the development of enterprise management mode to open dynamic management mode. Value chain management can not only help enterprises to enhance their own strength in the increasingly competitive environment of the modern market but also enrich the mode and method of enterprise e-commerce. Now, the actual implementation of the control method does not extend to the level of the value chain; the actual situation of enterprise.

The development philosophy is consistent Now, the actual implementation of the control method does not extend to the level of the value chain.

II. LITERATURE SURVEY

2.1 Online E – Stationery mobile application

The project is majorly used to reduce the offline customer. We can use this in any location to complete the printing process. It gives the nearby precise location of the stationery and the it gives the delivery. We can use this app also in college stationery or other stationeries, which the stationery is comes under the clone port app. It consumes less time and be more efficient. Implement secure authentication mechanisms, possibly including two-factor authentication for enhanced security. Provide a clean and intuitive dashboard displaying featured items, recent purchases, and personalized recommendations.

2.2 Automation System Using Android

With the use of computerized tools and software, the Order Management System seeks to automate manual processes, making data processing and storage simple, safe, and error-free. This approach simplifies record-keeping and frees up users' time to work on other projects by using widely accessible hardware and software. It guarantees essential data accessibility and maximizes resource efficiency by removing duplicate entries. In the end, it improves customer service delivery and performance.

III. EXISTING SYSTEM

The existing of the project is like online management process, where it is not specifically used for xerox purpose.

Implement an inventory management system to track stock levels, manage reorders, and prevent overselling. This could involve using specialized software or integrating inventory tools offered by the chosen e-commerce platform. Create a comprehensive catalog of stationery products, including categories such as pens, notebooks, desk organizers, and other office supplies. Each product should have clear descriptions, high-quality images, and pricing information.

IV. PROPOSED SYSTEM

As it allows consumers to put orders directly to the kitchen, this technology offers several benefits in terms of effective queue management by reducing waiting times. It also makes it easier to schedule orders ahead of time, which adds even more ease. By adding a card payment option, a lot less time is spent paying bills and making modifications at the payment counter. This approach guarantees user-friendliness in addition to time savings

4.1 Overview

The proposed app works in the following manner:

- E-stationery apps typically feature an extensive catalog of stationery products, including pens, pencils, notebooks, planners, paper, office supplies, art supplies, and more.
- Products may be categorized for easy navigation, allowing users to quickly find what they need.
- The app usually has a user-friendly interface with intuitive navigation, making it easy for customers to explore products and place orders.
- Robust search functionality and filters help users narrow down their choices based on criteria such as product type, brand, price range, and other specifications.
- Users can browse products, add them to their shopping cart, and complete the purchase through online payment methods. Secure payment gateways ensure a safe transaction.
- Users may have the option to create accounts, allowing them to track their order history, save favorite items, and manage personal information.

4.2 Functionalities

- Allow users to create accounts, providing them with personalized experiences, order history tracking, and the ability to save favorite items.
- Present a diverse range of stationery products, neatly categorized for easy navigation.
- Implement robust search functionality and filters to help users quickly find specific products based on various criteria.
- Provide detailed product descriptions, specifications, images, and pricing information to assist users in making informed purchasing decisions.
- Enable users to add products to their shopping cart, review items, and proceed to a secure checkout process.
- Implement secure payment gateways to facilitate online transactions, ensuring the protection of sensitive customer information.
- Offer order tracking functionalities, allowing users to monitor the status and location of their orders in real-time.

V. FLOW CHART

5.1 Login/ Sign up Flow Chart

5.3 Admin Flow Chart

Fig 3 : Admin Flow Chart

VI. CONCLUSION

E-stationery would involve an exploration of scholarly articles, publications, and academic journals that discuss the use, impact, and relevance of electronic stationery in various contexts. The review would likely cover topics such as the evolution of e-stationery, its advantages and disadvantages compared to traditional stationery, its role in environmental sustainability, the use of e-stationery in business and education, and the user experience and satisfaction with e-stationery. The literature review may also delve into the technological aspects of e-stationery, including the development of digital tools for creating and using e-stationery, as well as issues related to security, accessibility, and compatibility. Furthermore, it could explore the cultural and psychological implications of the shift from physical to electronic stationery in communication and creativity.
